

REPLACEMENT SHEET

ABSTRACT OF THE INVENTION

A disk-like pouch for containing an associated compact disk (CD) is disclosed, having a tab for containing indicia referring to the contents of the associated compact disk. The indicia tab extends from the disk-like pouch beyond the periphery of the compact disk when contained in the pouch. Also disclosed, is a system for cataloguing compact disks, comprising a plurality of the same disk-like pouch, nested in a housing resting on a horizontal surface and adapted so that each disk-like pouch can rotate about a common axis of the housing.
